Chapter 2 - Static Truss Problem Page 1 of 14 Statics Truss Problem 2.1 Statics We are going to start our discussion of Finite Element Analysis (FEA) with something very familiar. We are going to look at a simple statically determinate truss. Trusses are characterized by linear elements (beams) which are pinned together at their ends.

Unit 18 Trusses: Method of Joints Frame 18-1 *Introduction A truss is a structure composed of several members joined at their ends so as to form a rigid body. They are used to span greater distances and to carry larger loads than can be done effectively by a single beam or column. Consequently they are of great

6.6 Space Trusses Generalizing the structure of planar trusses to 3D results in space trusses. The most elementary 3D space truss structure is the tetrahedron. The members are connected with ball-and-socket joints. Simple space trusses can be obtained by adding 3 elements at a time to 3 existing joints and joining all the new members at a point.

Space truss problems can be solved by choosing a joint with only three unknown member forces

and one or more known load forces. The forces at the joint are summed in all three directions which will produce three equations and three unknowns. $\Sigma F_x = 0$ $\Sigma F_y = 0$ $\Sigma F_z = 0$
