Fracking, or hydraulic fracturing, is forcing fractures in a rock layer, by fluid that is put under pressure. Although it can happen naturally, it is now used as a method to force oil and natural gas from shale.. History and method. Some hydraulic fractures form naturally: certain dykes are examples. This lets gas and petroleum from source rocks get to reservoir rocks.

Oil depletion is the decline in oil production of a well, oil field, or geographic area. The Hubbert peak theory makes predictions of production rates based on prior discovery rates and anticipated production rates. Hubbert curves predict that the production curves of non-renewing resources approximate a bell curve. Thus, according to this theory, when the peak of production is passed ...
